

ParaTrack Gyro Module Case Study

Dunnet Bay Outfall

Gyro Module

Dunnet Bay Outfall: Scotland, UK Water Blind to Outfall Exit: 375 m (1238') Tracking used: Gyro Module Technique used: River Crossing

The ParaTrack **Gyro Module** was used in a hard rock formation with an 8" mud motor & 12 ¼" pilot hole. A small 60m surface coil was used. The system performed in a high vibration environment with no need for a shock tool or delays for recalibration / North seeking once the drilling started.
